DETAILED ACTION

1. This Office Action is the answer to the BPAI Decision filed on May 29, 2009, which paper has been placed of record in the file.
2. Claims **1-12, 14-44, and 74-77** are pending in this application.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in the interview with Mr. Mark Joy.

Amending the claims as the following:

Canceling claims 53-55.

Allowable Subject Matter/Reasons for Allowance

4. Claims **1, 31, 37, and 42** are allowed over the prior arts cited records.

The closest prior arts are:

1) Archibald (US 5,825,883) discloses a method of charging for distributed software that is "based on the usage of the software as opposed to distribution sale." Col. 7, 11. 30-31. Archibald uses a meter module as a means for determining the usage

of the software. This is illustrated in Fig. 6 ("22 or 26"). "The meter module detects when a digital application is activated when the user of a user system requests the particular digital application from a server or initiates a run command for the digital application." Archibald, col.1, 11. 38-42. *See also* Fig. 7.

2) Knapton, III (US 6,363,486) discloses object oriented programming and describes a method of controlling the usage of a software component by an application program on an end user's computer through the use of a password created from two keys, one created from an identifier of the application program and the other created from an identifier of the software component to be controlled. Col.2,11. 24-29.

3) Sobeski 15. Sobeski discloses the licensing of Java objects, which are software components. Col. 1, 11. 16-17. Sobeski describes a method whereby a Java object is utilized only in accordance with terms specified in a license file. A license manager running on an end user's computer manages the use of the Java objects and ensures the use of the Java objects corresponds with the terms in the license. Col. 1, 11.47-59. Col. 6, 1.47 - col. 7, 1.60 of Sobeski describes an embodiment (shown in Fig. 3) whereby the Java object is "called" to verify that the object is licensed for use on the client computer. Sobeski here presents an example code for calling the license manager to determine if the Java object may be used on the client computer. It is further explained that once the license manager has been called, a license file associated with the Java object is received. Sobeski here describes an example of a format for the license file. Sobeski describes Java objects, which can be a class of objects (col. 5,

11. 20), and states that "any number of instantiations of the object may be run on the client machine" (col. 5, 11. 21-22).

Therefore, it is clear from the description of Archibald, Knapton, III, and Sobeski, that the prior arts do not considered the possibility of: charging the customer according to use of the distributed software modules as determined during the monitoring step, wherein software usage is measured according to object instances created from the at least one object class, as included in claims 1, 31, 37, and 42.

5. Claims (2-12, 14-30, 74), (32-36), (38-41) and (43, 44, 75-77) are allowed because they are dependent claims of the allowable independent claims 1, 31, 37, and 42 above, in that order.

Conclusion

6. Claims **1-12, 14-44, and 74-77** are allowed.
